

Who We Are

Artificial Horizon is a research and development company pioneering the application of Artificial Intelligence (AI) in a wide spectrum of fields and domains. We harness the power of AI along with the 4th Industrial Revolution (4IR) technologies to provide unprecedented products and services that change the way the world perceives automation.

What We Do

We provide an advanced and fully integrated teleradiology solution powered by state-of-the-art Artificial Intelligence (AI) algorithms, capable of fast and accurate diagnoses of radiology images through a strategic partnership with Trust Medical Diagnostics, a leading medical diagnoses company pioneering the decentralization of radiology diagnostic services in the region without compromising on quality by providing institutions across the region with cost effective access to highly trained sub-specialized consultant radiologists.

Teleradiology Platform Consultant Reporting Services

Our teleradiology platform can be easily connected with the hospital's PACS or imaging modalities through a DICOM gateway without any integration requirements.

AI Powered Diagnosis

Our AI solution can easily integrate with the hospital's PACS system via Health Level 7 (HL7) integration standards and is already integrated in our Teleradiology Platform PACS.
