# ARTIFICIAL HORIZON

Artificial Horizon is a research and development company pioneering the application of Artificial Intelligence (AI) in a wide spectrum of fields and domains. We harness the power of AI along with the 4th Industrial Revolution (4IR) technologies to provide unprecedented products and services that change the way the world perceives automation.

Advanced Object and Event Detection ,Recognition, and Tracking using AI.

Whatever the object of interest is, event, or condition, our advanced Machine Vision solutions can detect it for you, track it, and recognize it in images, videos, and live footage with superior accuracy using state-of-the-art Deep Learning algorithms.
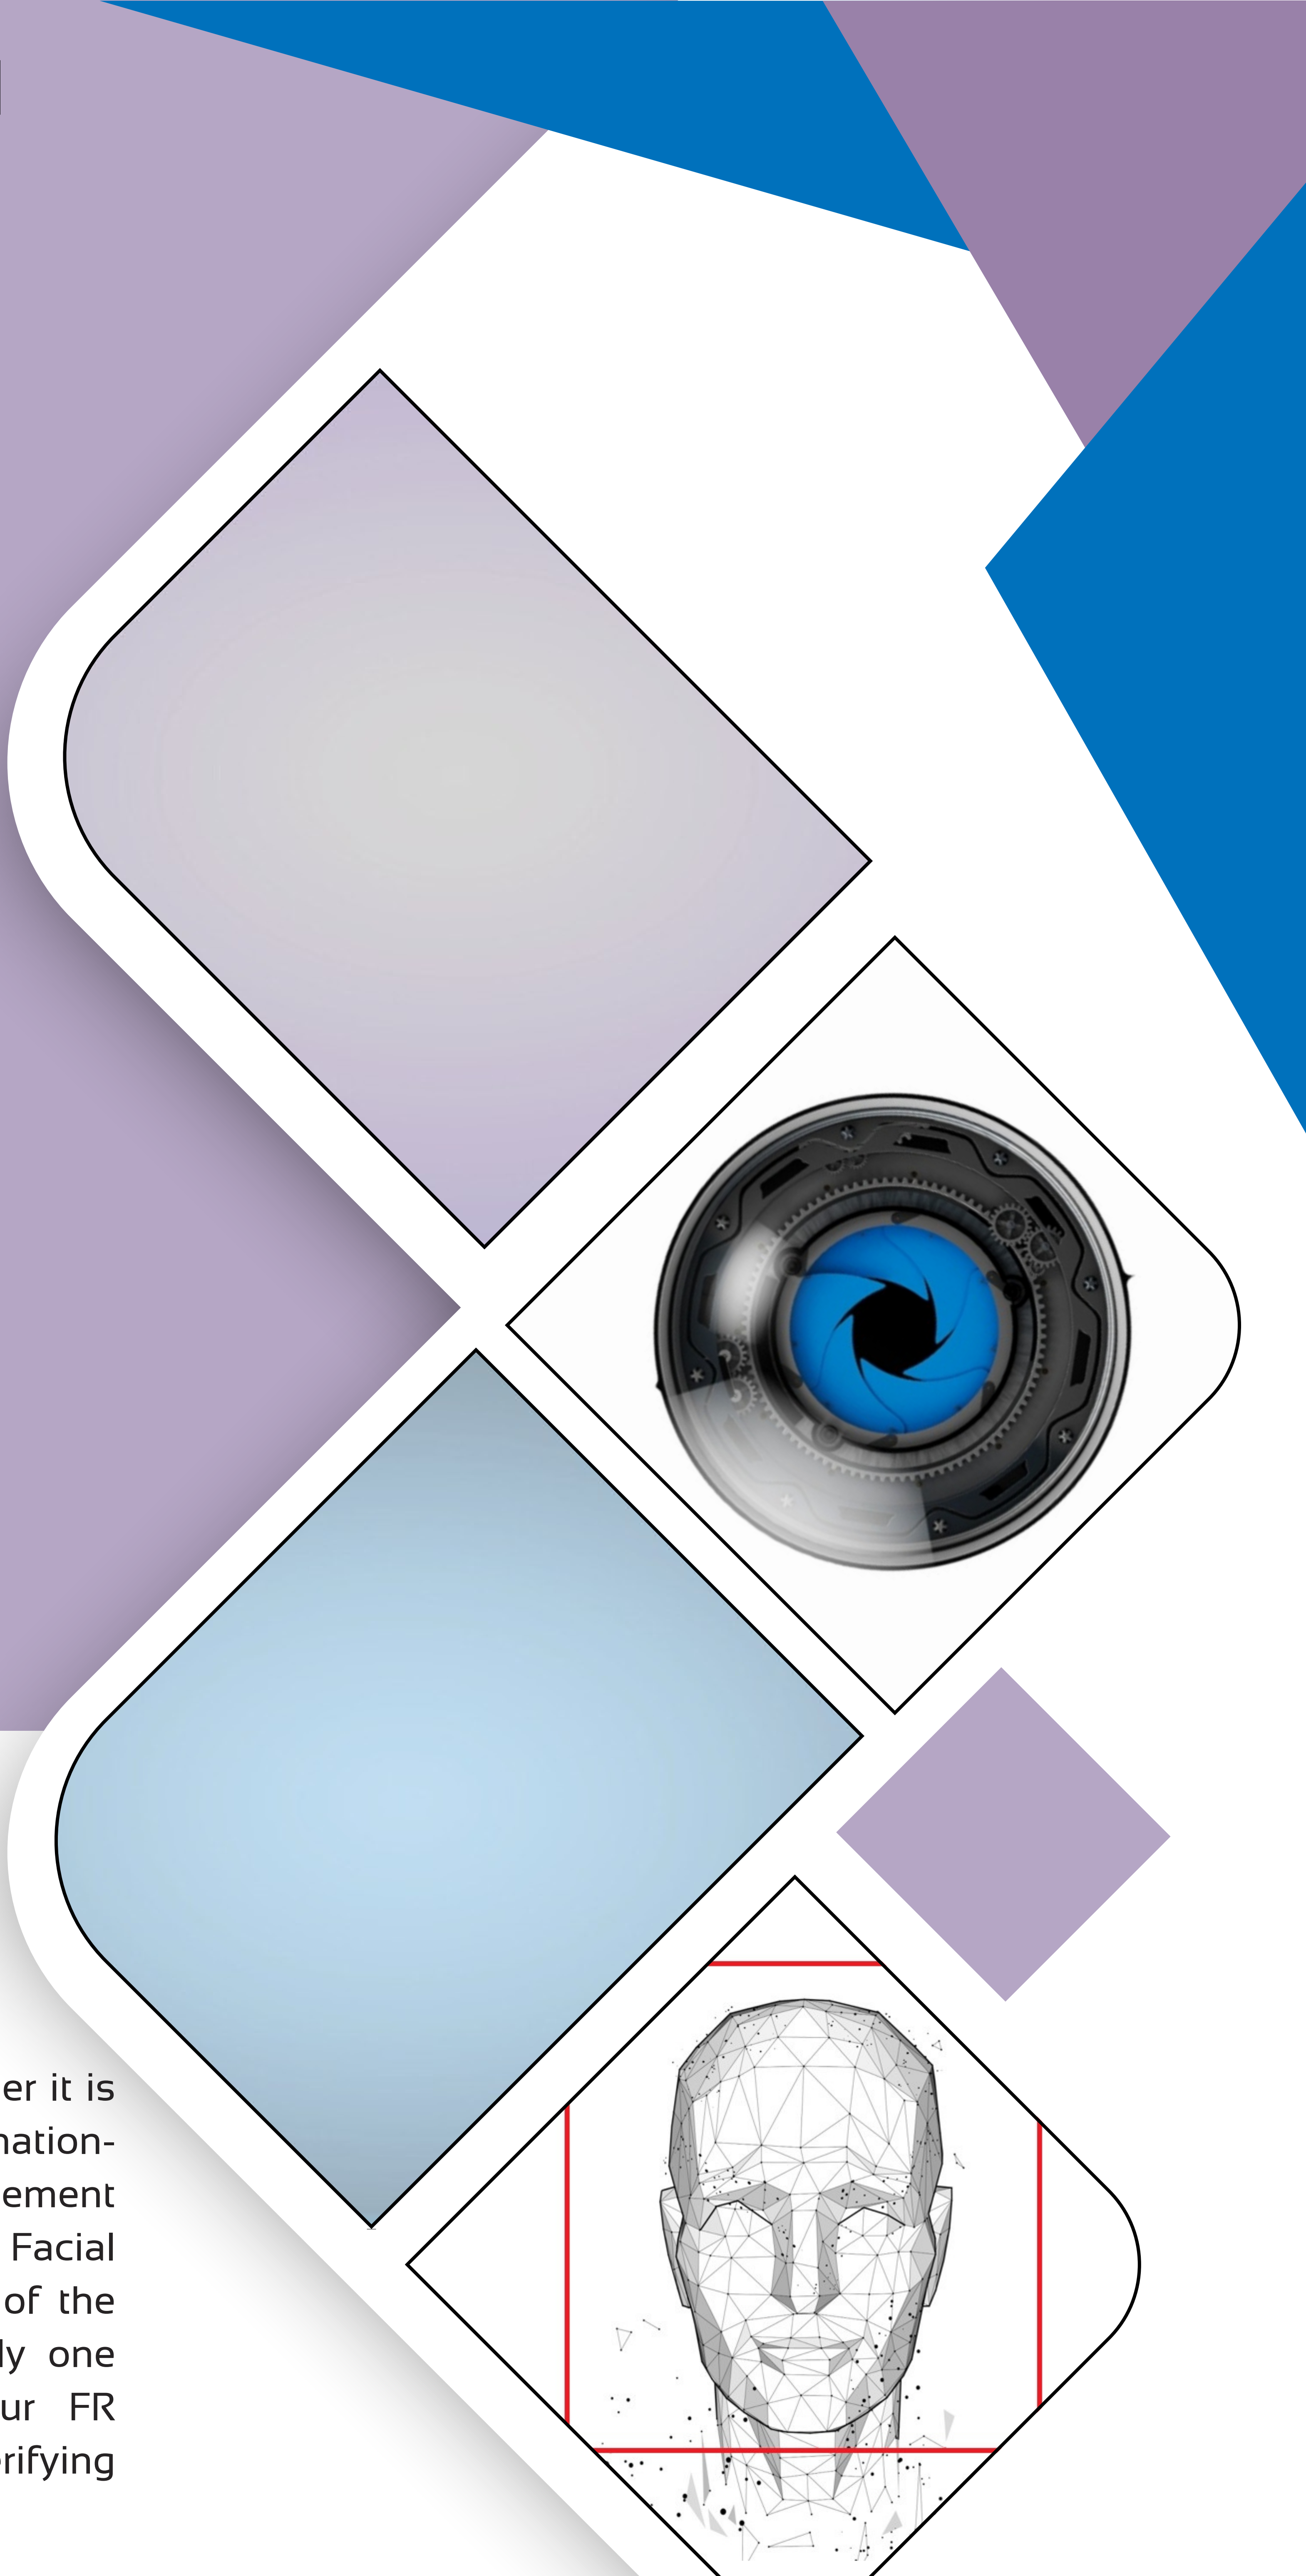

ARTIFICIAL HORIZON

Our Machine Vision solutions are powered by the most advanced Deep Learning and other vision algorithms the world has to offer. Integrated with some of the most advanced cameras out there supplied to us directly by our partners, rest assured that you will be equipped with the best sentinel eyes to detect, recognize, and track objects of interest, events, or faces seamlessly.

Advanced Cameras and State of the Art Machine Vision Algorithms.

No matter what the application is, whether it is a touchless staff entry solution, or a nation-wide immigration solution for law enforcement at airports, we provide state-of-the-art Facial Recognition (FR) solutions built on top of the most recent advances in research. Only one photo is required per person for our FR solutions to start recognizing and verifying faces with unrivaled accuracy.
